

runtime\_error

```
classDiagram
    class runtime_error
    class mm_record_not_found_error["mm::record_not_found_error"]
    mm_record_not_found_error --|> runtime_error
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'runtime\_error' with two empty compartments. Below it is a class box for 'mm::record\_not\_found\_error' with three compartments. The top compartment of the lower box contains the text 'mm::record\_not\_found\_error'. The bottom compartment contains two lines of text: '+ record\_not\_found\_error()' and '+ record\_not\_found\_error()'. A red arrow with an open triangular head points from the top of the lower box to the bottom of the upper box, indicating that 'mm::record\_not\_found\_error' inherits from 'runtime\_error'.

mm::record\_not\_found  
\_error

+ record\_not\_found\_error()  
+ record\_not\_found\_error()
